From: scanning_the_radio
Topic: 4 Message: 4

Greetings Club Members;

To start off ive been a Scanner nut ever since i was a little nut and I always wonderd just how can i desrable all these bleep hiss ding eee ahhh wiss things i was hearin on my radio. Come to find out i learned a new phrase since i started chatting on the internet called Protocol's . I figured i'd start with the basic's and start with the local pager system i keep hearing. come to find out its in a pocsag protocol transmision . how can i convert that in to ascii or somthin i can read ? I'd love to learn more about digital comunications and encode , decoding . Heck maybe i should start with ust a morse code printer that hooks up to a scanner or somthin ...

any way any help in my quest for learnin would be appreciated

Thanks

Like most people, I've had some trouble with credit in the past. For a long time I haven't been able to find a company that would give me a credit card at all. I found this site and I just had to share it with the rest of the group. It has all sorts of credit cards, some are guaranteed to be approved no matter what your credit history is like. Also, they have gold and platinum cards and offer free services for credit reports. You got to see this site.

7. open source radio software available

Yahoo group: ComputerControlledRadioSoftware
Date: 2002-05-11 04:57:14 UTC
From: Bob Parnass, AJ9S
Topic: 7 Message: 7

```
I have written several open source, multiplatform programs
which you may download freely from my web page at:

http://members.core.com/~parnass

The software is written using Tcl/Tk and works on Linux, most
versions of Microsoft Windows, and perhaps MacOS X, Solaris,
BSD, and other UNIX variants.

Current software includes:

tk75 - control and cloning software for the ICOM IC-R75 receiver
tk120 - cloning software for the Yaesu VR-120
tk500 - cloning software for the Yaesu VR-500
tk545 - control and cloning software for the Japan Radio NRD-545 receiver
tk8500 - control and cloning software for the ICOM IC-R8500 receiver

I don't warrant the software, but it won't cost you anything.
Have fun.

Yahoo group: ComputerControlledRadioSoftware
Date: 2002-05-19 03:04:33 UTC
From: scansocal
Topic: 9 Message: 9

Question for the group:

Is it (somewhat) normal to have distorted audio after completing a discriminator tap on a scanner?

10. Re: [Computer Controlled Radio Software] Discriminator tap

Yahoo group: ComputerControlledRadioSoftware
Date: 2002-05-19 03:41:04 UTC
From: Bob Parnass, AJ9S
Topic: 9 Message: 10

If done properly, adding a discriminator tap should not affect
the audio quality. Connecting a low impedance device directly to
the discriminator can load down the discriminator circuity and
you don't want that.

You would need to add a buffer stage to isolate a low impedance
device from the radio.

Topic: 9 Message: 11

In the lead that you have coming out from the radio, did you put a capacitor in it? As it is needed for DC blocking and does not load the circuit. A 0.1 micro farad capacitor should do.
Howard

25. tk500 v1.2 open source software for Yaesu VR-500 available

Yahoo group: ComputerControlledRadioSoftware
Date: 2002-12-03 06:08:57 UTC
From: Bob Parnass, AJ9S
Topic: 25 Message: 25

tk500 version 1.2 is now available for free download.

tk500 is an open source, multi-platform programming utility for the
Yaesu VR-500 portable receiver.

Improvements in version 1.2 include:

1) Memory bank channels may now be edited within tk500. Channels
may be changed, deleted, inserted, or swapped with adjacent
channels. More comprehensive changes can be made by
exporting the channels to a CSV file, then using a text
editor or spreadsheet program.

2) When the mode for a memory channel imported from a CSV file
is not specified, tk500 will set the mode according
to the Auto Band plan.

3) Labels and Preferential flags will now be cleared when clearing
all memory channels.

4) Settings will be validated before encoding.

5) Fixed a bug in encoding the mode for the second channel
of each Dual Watch pair.

tk500 has a graphical user interface and runs on Linux, BSD, MacOS X,
Windows (95 and later), etc.

You can learn about and download a beta test version of tk500
from my home page:

http://parnass.com

I don't warrant the software, though it will cost you nothing.

Thanks to Paul Martin, N8ULS for providing experimental data and
to Dan Wanchic, WA8VZQ for posting detailed
information about the RDF file layout.

26. tk120 v1.1 open source software for Yaesu VR-120 available

Yahoo group: ComputerControlledRadioSoftware
Date: 2002-12-03 06:10:45 UTC
From: Bob Parnass, AJ9S
Topic: 26 Message: 26

tk120 version 1.1 is now ready for free download.

tk120 is open source, multi-platform software which configures
the Yaesu VR-120 portable receiver. It runs on Linux, MacOS X,
BSD, UNIX, Windows (95 and later) and other operating systems.

Changes in version 1.1 include:

1) Memory bank channels may now be edited within tk120.
Channels may be changed, deleted, inserted, or swapped
with adjacent channels. More comprehensive changes can
be made by exporting the channels to a CSV file, then
using a text editor or spreadsheet program.

2) When the mode for a memory channel imported from a CSV file
is not specified, tk120 will set the mode according
to the Auto Band plan.

You can learn about and download an experimental version
of tk120 from:

http://parnass.com

Thanks to Russell Hall, Gary Kinsman, and Torsten Grochowski for
testing tk120. Jim Vincent, KC7RYD, and others helped by
sending me image files from their VR-120s.

I don't warrant the software, though it will cost you nothing.

27. tk2 v0.7 open source software for ICOM IC-R2 available

Yahoo group: ComputerControlledRadioSoftware
Date: 2002-12-04 01:58:18 UTC
From: Bob Parnass, AJ9S
Topic: 27 Message: 27

tk2 version 0.7 is now available for free download.

tk2 is open source, multi-platform software which configures the ICOM IC-R2 wide coverage receiver. It runs on Linux, MacOS X, BSD, UNIX, Windows (95 and later), and other operating systems.

Changes in version 0.7 include:

1) Memory bank channels may now be edited within tk2. Channels may be changed, deleted, inserted, or swapped with adjacent channels. More comprehensive changes can be made by exporting the channels to a CSV file, then using a text editor or spreadsheet program.

2) Added a duplicate frequency check.

3) Fixed a bug which truncated interstitial frequencies, e.g., 470.3125, and showed them without the proper last digit.

You can learn about and freely download an experimental version of tk2 from:

http://parnass.com

I don't warrant the software, though it will cost you nothing.

Thanks to BlakkeKatte@yahoo.co.uk for publishing detailed information about the IC-R2 protocol and memory layout at http://uk.geocities.com/blakkekatte. Thanks also to Les Butler, Thor Heglund, and other IC-R2 owners for helping to test tk2.

28. tk92 v0.2 open source software for PRO-92/PRO-2067 enhanced

Yahoo group: ComputerControlledRadioSoftware
Date: 2002-12-05 13:38:25 UTC
From: Bob Parnass, AJ9S
Topic: 28 Message: 28

tk92 v0.2 is now available for free download. tk92 is open source, multi-platform software for configuring Radio Shack PRO-92 and PRO-2067 scanner radios.

I wrote tk92 primarily for radio hobbyists who use Linux, MacOS X, BSD, Solaris, Unix, or other non-Windows operating systems. tk92 works on Windows-based systems (95 and later), too.

This version contains several new features but may run slowly or not at all on computers without sufficient RAM.

New features in tk92 v0.2 include:

1) Memory bank channels can now be edited within tk92. Channels can be changed, deleted, inserted, or swapped with adjacent channels. More comprehensive changes can be made by exporting the channels to a CSV file, then using a text editor or spreadsheet program.
2) Talk groups can now be changed within tk92.
3) The 10 weather channels can be reprogrammed to custom frequencies.
4) tk92 now opens the serial port just before reading from or writing to the radio instead of when the program begins. This means you can wait to connect the radio until just before performing a data transfer.
5) A priority channel can be assigned.
6) The backlight can be set to stay on until the PRO-92 is powered off by setting the backlight timeout to 0 seconds.
7) The mode defaults to FM if not specified when importing memory channels from a CSV file.
8) A bug in encoding the 4-line Welcome message has been fixed.

Thanks to Ken Plotkin and Bill Petrowsky who determined and published the PRO-92 and PRO-2067 memory image layout, with corrections from Don Starr. Bill suggested implementing preprogrammed fleet maps in Win92 and I incorporated them into tk92, as well. Steve Falco published the source code for his 92linux command line based software, written in the C language.

Thanks also to Greg Shepherd, Ryan Schave, and others for helping to test tk92.

tk92 is undergoing active development. You can learn about and freely download the latest beta test version of tk92 from:

http://parnass.com

I don't warrant the software, though it will cost you nothing.

Your best bet then is to find a sound card that is in the price range you want to pay and then see if it will allow you to use more than one in a computer, its the only way its going to happen without spending over $1,000USD.

Go to radio shack and get a stereo female Y RCA connector terminating in a stereo mini connector for sound card. Then get mono/male RCA connector from two scanners. One scanner will record on left one will record on right channel of sound card. Use Music Match to compress files to mp3 to save space.

> Regards from Frank (KC4GKY)

Frank, MixW includes CAT control for the 718; in addition, TRX-Manager supports it. It would appear Frequency Manager and Radiocom will also work with the 718 (it just says Icom in the supported radio lists for these 2 packages).

With the exception of MixW, all these packages have a link here:

http://www.strongsignals.net/access/content/software.html#HF

In addition, both MixW and TRX Manager have Yahoo lists you can join. There's a direct link to the TRX Manager list on the page listed above. 73s and good luck...Mike

37. Serial Data over Audio Channel

Yahoo group: ComputerControlledRadioSoftware
Date: 2003-01-12 23:20:42 UTC
From: walter woodrow <oopicwow@yahoo.com>
Topic: 37 Message: 37

Hello All,

I am trying to figure out how I can send serial data over an audio channel. I purchased a transmitter/reciever and the instructions state that data can be sent over the audio channel. Well, that is the extent that the instruction go into. If anyone has any idea, that would be great.

Thanks in advance,
Walter

Using the earphone jack should suffice. That output is greatly reduced. I
use it all the time.

Three resistors is all that's needed. Load the output with say 33ohms across the speaker output. Pass the hot side through a 10K resistor and strap the output with 47K across the line level input.

Radio shack makes an in-line volume control which has a 1/8"
plug on one end to plug into the scanner etc, a volume control
in the line and then a 1/8" socket on the other end to plug in
headphones or other thing for which you want a reduced volume
It should work just fine to drop the output to a level suitable for
a recorder etc.

Spkr-out on 99% of scanners and receivers is controlled by the radio's volume control - why would you ever need a device inline then? I feed everything via Spkr-out: Digitial recorders, tape recorder, PC-ALE and live-scanner-feed to chat rooms from the speaker-out jack on all my radios. The Line-out, recorder-out etc jacks on most scanners have no volume control, and are in fact too LOW for use in many recorders etc.

From: jdunfitzger <radio@slakeyourthirst.com>
Topic: 45 Message: 45

I haven't used either of these programs in quite a while. A short time ago I noticed that Scanner Recorder wouldn't work but never spent the time to figure why.

Today I tried Invert and I get an error message: 'Wave Output device is already in use. Full duplex capable?' I have a SoundBlaster Pro so it should be full duplex. There isn't anything else running that could be using the soundcard other than the usual Windows sounds.

I'm trying this with the line out from an 895 to the soundcard line in. I can stream a feed this way but am not at this time. Could WMP or WinAmp have taken control of the sound card? That's all I can think of right now. Hopefully I'm thinking too hard and someone can point me to a simpler solution.

Thanks,

J.

ScanRecorder is fully capable of, and can cause at the drop of a hat - just about the worst crashes Windows can survive. It "hangs on" for quite awhile after it's shut down even. Don't ever save a file to or from anywhere else while scanrecorder is running! I thought the speakers would blow along with the monitor and everything else anytime I forgot and tried that. ;-) "Recover Ram" from MemTurbo forces those programs to let go when you're thru with them. Of course most "Full Duplex" sound cards are anything but, as I have discovered when trying to give them more than one thing at a time to do. A very few programs that I am aware of, such as certain Scan*Star versions can support dual-use of the sound card for recording/playback from more than one source. Jack

Thanks Jack, duly noted on the ScanRec. I'm not really worried about it at this time nor am I trying to run both programs concurrently. What I'm concerned with is that error message I get from Invert as I can't figure what other program would be using the soundcard when I try to start Invert.

Since I last posted I tried running Invert while I was feeding an audio stream and I got a different error message. It was ' Input device already in use by another application' There was no mention of the full duplex part. This leads me to believe the SoundBlaster Pro 220(or equivalent) that my computer tells me I have may not be full duplex. Is there a way to define what my soundcard's capabilities are?

J, I was mixing up Icom-radio groups with this anyway - my goof! Not much activity here to snort at anyway. If you discover the actual duplexing capabilities of the soundcards let us know! Mine is so old I have no idea where the specs to it went.

Anyway, I am using Scan*Star Deluxe (7.62 - the last version that drove the BC-895 well), ScanCat Gold SE (for the Icom R71 & 72 only), and Smart-R8 to drive the Drake R8B. The Pro-2005, Pro-2045, Pro-93, and Sony ICF-SC1 I grudgingly program manually. For plotting I am testing DX-Atlas, a nice program but no ability to label "pinned" locations. My only excursion into digital decoding is the PC-ALE program, which I use extensively right now due to the heavy Air Mobility Command trfc for the war effort. Anybody else want to share what's being used? Jack

52. BC250D compatible software

Yahoo group: ComputerControlledRadioSoftware
Date: 2003-01-24 17:38:23 UTC
From: ka3jjz <ka3jjz@erols.com>
Topic: 52 Message: 52

I've seen some comments on other boards regarding software for the new 250D, and how difficult it is to program than other radios. The following might be of some help;

The one that seems to be getting some attention lately is Ben Saladino's Trunk Manager. I personally know of 1 or 2 people up here in the Baltimore area and they say it works pretty well.

There are other packages as well; Andy's Programming package for the 780 works- to a point (it seems to have some issues with setting up trunking correctly). Scancat just released a version that supposedly works with the 250d (they have their own mailing list on Yahoo, so you can ask questions about it there). Additionally, we have some other entries;

a. Gomemrt Buysen just released a free BC250D cloning utility which on the surface, strongly resembles the very popular BC245 Backup program; he has also scheduled a release of ARC250D for Feb;
b. Another package coming in Feb is Trunkstar 785 (Scanstar), which may also work with the 250;
c. Tracy Justus has put up Control Freq V2.0 (alpha);
d. Unitrol also works with the 250, albeit in conventional mode only
e. Dave Hitcher has put changes into his very popular IDTracker program so it now supports the 250.

Finally, I'd avoid the Escanner software like the plague. If the past messages on the Strong Signals boards are any indication, it's a waste of your money- and as I understand it, quite a bear to uninstall.

I haven't put all the links up on the Strong Signals Software page yet because I'm waiting to see how things will shake out with the new trunktrackers software-wise. However, the URLs for Andy's Programmer (you must be a member of the BC780 group at Yahoo to get it), Trunk Manager, Scancat, Unitrol and IDTracker are all still good. Let me know if you need the others. You can get to the Strong Signals web site at http://www.strongsignals.net and select 'software' from the pull down menu to the left.

Topic: 55 Message: 56

Specify what data signals your are interested in.

If you are interested in decoding DTMF, CSTCC, multi-tone, zeva, etc.
then Wintone is the way to go. Depending are your radio's audio
source filtering, you may need to tap the FM discrimator output.

If it's packet, ACARS, APRS (packet) then just get the appropriate
software from any of the many web sources.

For most applicatins, the sound card will do fine. If you are
talking about mobile data terminals or paging information, there are
plenty of sites for that software. I have no experience with any
of those.

I've just added 2 sites to our links section, both of which are fairly well known sources of links for soundcard software; Dr.Oliver Welp's site, and the Digital World page run by WM2U. These should be enough to get most people started.

As an aside, MDT and Pager decoding (while technically illegal in the US, even tho people still do it...) software sources pretty well dried up here after certain laws were passed, and the Breaking News Network fiasco. I think some European sites still carry things like this.

From what I've read on the various boards, most people think it's a bit of a rip off. For USD100, you can do *lots* better. If you're thinking about software for the digital trunktrackers, you're better off (and it won't cost you nearly as much!) with Trunk Manager. I know of at least 2 people in the Baltimore area that are using that software with the Uniden 250D and say it works well.

You can find links to Trunk Manager and a couple of other packages on the Strong Signals Software Page- the URL is in our links section.

Though the price is right, Trunk Manager only does that, manage files.
I have this program.

The Scancat, or Butel's Advance Radio Control are expensive but will
do much better management and also provide live control and recording.
Butel will be available shortly at http://www.butel.nl/
Scancat is available at http://www.scancat.com/

That's a given, and another name for a "manager-only", or useless. Every two-bit piece of freeware can do that. Control, such as Scan*Star, TrunkStar etc provide are the only programs that s/b considered.

Pray tell me what is management but upload, save, edit and download.
That piece of junk (E-Scanner) that came with the radio does some of
that. I have that new TM program and that is all it will do, manage.

Please tighten your focus. Guides to what? This group? or to what topic specifically? If you mean a guide to this group, this group's homepage is a decent start.

> how do i tell if my radio is filterd?

Filtered? Be more specific. All receivers have filters of one kind or another in them, depending on the application and the kind of receiver.

From: ka3jjz <ka3jjz@erols.com>
Topic: 66 Message: 66

Hi all; when I joined this group, I wondered if there were links to software for various control functions, decoding and so forth that I didn't know about. Well, when I looked, there was very little in our links section.

Well, that's changed.

I've added a bunch of folders and links for decoders, trunking functions, TNC support and more. Much of this data comes from the Strong Signals Software page (which I edit), and the research I've been doing to update a digital document for the WUN.

Hopefully, this will get the ball rolling and get others to add links, as I've done, for everyone's benefit.

As a side note, my software page also lists several radio control packages, including several packages for ham transceivers. So do be sure to check our links and the Software page out; and add some more to the knowledge base. 73s Mike

70. Uniden scanner software

Yahoo group: ComputerControlledRadioSoftware
Date: 2003-03-06 02:03:08 UTC
From: Steve St. Denis
Topic: 70 Message: 70

BC780XLT Uniden Bearcat Remote Control Software
NOW ONLY $19.95 SALE $14.95
Or $24.95 SALE $19.95 with a Commercial Copy of the Frequency Logger Software.

I am going to be buying the BC780xlt scanner next week and I am looking for the best computer control scanner software for the radio. I came across this program on the internet and was wondering if any one is using this program. I'm looking for a program that will alow me to program frequency searches so I can leave it running while I'm away and it will log the frequencies into a file for me so I don't have to stay beside the scanner and computer and manually do it, also it controls all the other functions of the bc780xlt scanner radio. Is there any other program in this catagory that will do all the things this program will do or are there better scanner control programs out there for the bc780xlt that I'm not aware of.
Steve

Steve; if that software in the top line is the ScanPro offering, do yourself a favor and scan past it. Most people I know have found their offerings to be of very poor quality; I know- I reviewed their packages for the 895 and 245.

Get ARC780 from Butel (now sold by Scanner Master). There's a review, and a Yahoo group devoted to this package, linked on the Strong Signals Software page. 73s Mike Strong Signals Software page editor

This is true, however the question was about frequency searching and logging, there was no mention of TRUNKING, some do not use their scanners for trunking even though there are few people who seem to think that.

:-)

From: ka3jjz
Topic: 83 Message: 83

Hi all - a couple of important news items for you...

. The same people that developed Probe for the Optocom units now have a version called Probe1K - for the PCR1000. There's a link for this off the Probe web site

. Steve Halligen - who runs the very successful scan massachussets site - started a Yahoo group devoted to the Probe products at:

http://groups.yahoo.com/group/Probe-Software/

I'll be adding these links to the Strong Signals software page shortly - I plan to send a new page to Rich this evening.

84. tk10, new open source software for IC-R10

Yahoo group: ComputerControlledRadioSoftware
Date: 2003-05-01 18:47:43 UTC
From: Bob Parnass, AJ9S
Topic: 84 Message: 84

tk10 is new open source, multi-platform software for configuring
the ICOM IC-R10 handheld receiver.

I wrote tk10 primarily for radio hobbyists who use Linux, MacOS X,
BSD, Solaris, Unix, or other non-Windows operating systems.
tk10 works on Windows-based systems (95 and later), too.

tk10 lets you:

1) Read a memory image from an IC-R10 receiver or a native t10 file.
2) View and change settings using a graphical interface.
3) Sort memory channels by frequency or by label.
4) Import and export memory channel data from a CSV file.
5) Write an image from the computer to the radio.

tk10 v0.2 supports USA versions of the IC-R10.

I do not own an IC-R10 and developed tk10 with the help
of several IC-R10 owners. Thanks to Mike Failing who lent me
his IC-R10 for testing. Les Butler, along with Ted Hay, Jim Cooper,
Bill White, and Ted Maszerowski are tk10 beta testers.

tk10 is undergoing active development. You can learn about and
freely download the latest beta test version of tk10 from:

http://parnass.com

I don't warrant the software, though it will cost you nothing.

88. New To Group / Remote Control

Yahoo group: ComputerControlledRadioSoftware
Date: 2003-05-21 19:55:29 UTC
From: David K.J. Bishop
Topic: 88 Message: 88

I am new to the group so if this question out of context for this group, just let me know.

I need a device that attaches to the serial port of a computer that will work with an RF remote control. I have tried the X10 products such as the MR26A and the KR22 without success. The range is too unreliable. I have also used the Creative Blaster Infra-Red based products, but do to the required line of site that is required, it won't work for my application.

I would appreciate it anyone can recommend any products that they have worked with that can be used with a PC based on the description above.

Thanks.

Dave

From: W. Nolen
Topic: 89 Message: 89

There are many devices that "attach to the serial porrt of a computer that will work with a[n} RF remote control" that was requested by David Bishop.

My questions are: 1) Are you simply looking for a radio frequency system which will remotely turn something on/off? or 2) Are you simply looking for a switch that isn't Radio Frequency sensitive such as a switch that will work in a high radio frequency envirnoment (say a radio station, etc.)?

Perhaps if you stated what you want to do, some of us could come up with a solution that is viable and perhaps affordable!

From: David K.J. Bishop
Topic: 89 Message: 90

That's a fair question!

In addition to being a consultant, I am also a Stage/Comedy Hypnotist. I developed a software application that I use during my show that I use to play sound effects while I'm on stage. Until recently, everything has worked just fine using an I/R remote from Creative Blaster. However, since it requires a direct line of site, it's become too cumbersome.

I need an R/F device that will work up to about 50 feet and that is reliable. I ordered a VersaPoint remote device from Interlink yesterday. It's a USB device. I just have to play with it a bit to gain access to it from Delphi. I'm hoping that it's an HID classed device. The remote and the receiver cost just under $50 including shipping so it's actually priced about the same as the X10 equipment that didn't work worth a damn.

If anyone has any other recommendations, I would appreciate it. I have heard very good things about the Interlink remote. The only problem is, they sell it as a PowerPoint device so there really isn't any key assignment logic from what I can tell. If that were the case, I wouldn't even have to worry about developing an HID routine to manage the messages from the device.

I'll post a follow up at a later date to let everyone know how things went for future reference.

Dave

AR-5000 +3 SCANNER + SDU5500

Hi list,

I found this radio on ebay,
does anyone here use this type of receiver?

http://cgi.ebay.co.uk/ws/eBayISAPI.dll?ViewItem&item=3051850448

Thanks Terry.

FREE FREQUENCY SEARCH for your city, county, location or the entire state.
I am appalled at the companies that are charging for frequency searches for scanner users, this is a simple process and the results can be exported to most database programs for sorting or printing.
The link is enclosed at the end of this post.
I do a lot of traveling and found this information very useful. The site is updated constantly and can be accessed by service also. Time permitting I will do searches for those that can not navigate the site properly (tho it is easy to understand) Good Luck and STOP PAYING FOR YOUR FREQUENCY S

I want to apologize for the slowness of the group. Anyhow, let's try and fire up the discussions.

What is your favorite, or least favorite, radio control software? What does it do that you can't live without, or doesn't do that you are begging for?

I have a couple programs I've tinkered with myself - one I've released in beta (EZProg895) for the Uniden BC-895 and family scanners, and a similar program for the Yaesu FT-840 transciever.

Winter is here, and I hope to redo these programs in VB.NET. I have my own ideas of what's important, but I would like to get some alternative viewpoints, which is frankly why I startrd this poor neglected group.

Topic: 106 Message: 107

I have an Icom R-8500. My least favorite software program for it is....all of them. My most favorite is....none of them. For this particular radio, there is not one package that does what I consider must haves for a radio control package:

- FAST scan speeds
- scan files in .mdb or .xls format. Or at least EASY to import from a .csv
- SIMPLE, easy user interface
- low cost (< $100US)

I think those are pretty basic features, but it seems that no-one has been able to handle it for the '8500, which is one reason I haven't even played with any radio control software for a few years. Maybe there is something out there that I'm overlooking.

I guess I'd have to backpedal a bit and say that my favorite is the freeware TRUNKER, but it's use is limited to monitoring trunked radio systems. I understand that the DeltaComm software is very good for conventional monitoring, but expensive.

The new PROBE1K package is supposed to be excellent for use with the ICOM PCR-1000 radio. I'm strongly considering selling the '8500 and getting a PCR-1000 for that reason alone.

I wish I had the skills to write PC software. I think there is a dedicated group of '8500 users that would be customers for a good commercially available product.

I use Radio Manager for a RS PRO-2035 w/ OS535 board. It's functional, but not as impressive as the ARC780 software I use for my BC780XLT. I'd like something with a lot of bang to it for a decent price to use with the RS rig. I also need a good program for my FT-847.

109. What radio(s) and software(s) do you have/use?

Yahoo group: ComputerControlledRadioSoftware
Date: 2004-01-23 18:32:28 UTC
From: p3epilog
Topic: 109 Message: 109

I'm trying to find out what kind of equipment folks are using out there, and this is a two-part question.

Part 1: If you are using software with your radio, what kind of radio do you have?

Part 2: What software do you use with each radio, and what software have you considered? What made you choose one software package over another?

Hopefully this will generate some good discussion.

Thanks,
Andy

110. Software Advice for Uniden BC780XLT

Yahoo group: ComputerControlledRadioSoftware
Date: 2004-01-23 18:33:04 UTC
From: p3epilog
Topic: 110 Message: 110

I am in the process of finding a software package that I can use to run my Uniden BC780XLT. Ideally, I would like something that meets the following requirements:
- doesn't cost too much (under $100)
- at a minimum, can do everything that can be done without software
- simultaneous scanning of both conventional and trunked systems
- simultaneous logging (text) of both conv. and trunked systems
- audio logging of both conventional and trunked systems (or an interface with another audio logging package that will capture date and freq/TG info)
- good documentation and support
- email notification of activity on selected freqs/TGs
- unattended logging/capture of TG IDs on a known trunked system with number and duration of hits (to help find new TGs that are active)

So far, I have looked at Spectrum Explorer, ScanCat Gold SE, and the suite from Bensware (Frequency Manager, Radio Manager and Trunk Manager). Any other suggestions would be appreciated. I have heard many good things about ARC780, but have not tried it yet.

Thanks,
Andy

111. Re: [Computer Controlled Radio Software] Software Advice for Uniden BC780XLT

ARC780 is the best bang for the buck, and the programmer himself, Ubbe, gives direct support within days! He listens to the users, and even set up his own email group to help. You can check it out or join at:

http://groups.yahoo.com/group/arc780-software

And you can download a trial/demo copy free at:

http://www.butel.nl

Hope this helps, and 73,
Tracy KC5RBQ/7

I wrote all my own software. You are welcome to download it freely
and use it yourself. See http://parnass.com

I wrote free software for other radios which I
do not own (e.g., IC-R3, IC-R5, IC-R10, IC-R75, VR-150).

I have an Optocom receiver and an Icom PCR-100.... although I am planning to sell both of them to get a PCR-1000.

I wrote my own software as I couldn't find what I wanted. To me the important things are:

1. Being able to scan directly from frequencies/alphatags in a CSV file based on keywords.

2. Being able to record each channel to seperate WAV files on the PC.

3. Reasonable scanning speed

My next development will be to add a remote control interface so I can control it remotely.

Cheers
Paul

Not sure if this group is still active? But it it is I have a question that you may be able to assist me with:

I'm writing a program in C++ to control my Icom PCR-100 and I'm having trouble getting a decent scanning speed. The sequence of events is as follows:

1. Write frequency mode and filter
2. wait n ms
3. check for SQL open
4. repeat

The problem is the ammount of time that I seem to have to wait for the squelch to settle. If I set it to about 200ms I seem to get correct behaviour, i.e. the scanner stops on all frequencies, but as I decrease the delay to say 70ms (which is still only 15ch/sec) it doesn't seem to stop on ANY frequencies regardless.

The Icom software seems to manage to scan at a decent speed without problems. Has anyone been down this route before that could give me any advice on a better way to do it?

TIA
Paul Maher

From: Bob Parnass, AJ9S
Topic: 118 Message: 119

I have no experience with the PCR100, but I can tell
you how I avoided the problem in the tk8500 software I
wrote for the ICOM IC-R8500.

Instead of commanding the radio to tune to each frequency
in sequence, tk8500 commands the radio to start scanning memories.
The IC-R8500 then scans at its fastest speed (40 ch/sec), as it would
if you used the front panel controls.
tk8500 polls the radio (at an interval adjustable by the
user), checking the squelch status.

The advantage is higher scan speed. The disadvantage is that
tk8500 cannot display the frequency on the monitor screen during
the scan because tk8500 doesn't know, at any given
instant during the scan, which channel the radio is sampling.
The software displays the frequency and
an S-meter reading when the squelch is open or when
the not scanning.

I could be wrong on this but a buddy and I did a program for Bill Cheek's interface for the Pro-2004/5/6 scanners IN VB4/5/6 and we found that the program ram much better if we didn't have the screen update for every frequency as it scanned, it updated when it had the time to and we just made sure it was correct when it did stop. So if you could be spending to much time on screen updates.

127. Recording software

Yahoo group: ComputerControlledRadioSoftware
Date: 2004-05-20 21:58:07 UTC
From: stuckinthemud_org
Topic: 127 Message: 127

Can anyone point me in the direction of:

- Multi-channel recording software (up to 4 channels)
- Multi input USB sound interfaces for a laptop

Use is for scanning, so quality (in hi-fi terms) is obviously unimportant and I'm after something cheap-n-cheerful on the hardware front.

Jim

Jim,

The sound recorder I use is ScanRec and you can download it free at
<www.davee.com>

It has only 2 channels but it is purposefully written to cater for
scanner recording.

Hope this helps?

The Big Fella

Hey there,
For multi channel recording (up to 32 simultaneious independent channels) check out VRS recorder from NCH Swift Sound http://www.nch.com.au/vrs/index.html . This is the software we use in our remote monitoring facilities. We use M-Audio brand multi input sound cards (usually between 4 and 8 channels per PC chassis) to feed signals into the VRS recording software. There are similar multi input sound systems available that support both USB and Firewire formats.

-Jon

131. Software for new IC-R20 ?

Yahoo group: ComputerControlledRadioSoftware
Date: 2004-05-25 10:14:15 UTC
From: dl3yeb
Topic: 131 Message: 131

Hi all,

does anybody know if there is already some other software to program and control the new Icom R20 available than the original CS-R20 from Icom ?

I searched in the internet, but didn´t find any software for the R20.

73,
Thomas (DL3YEB)

132. RxPlus: A New full featured Software Controler for the TenTec RX320 and RX320D R

Yahoo group: ComputerControlledRadioSoftware
Date: 2004-06-04 17:19:03 UTC
From: noelbou
Topic: 132 Message: 132

TELE DATA Inc. is pleased to announce the release of an exciting new software controller
for the Ten-Tec RX-320 and RX-320D PC Controled Shortwave Receivers.

RxPlus is actually like four program in one ...

- A full featured Receiver Controller with it's unique Visual Band Explorer for easy
band selection and scanning and a powerful Scanning Engine with distinctive features like
Strong Signal Highlighting and Automatic Squelch.
- An Audio Processor with Wave Form , Spectrum and Waterfall Display.
- Audio Filters (BandPass, Notch, Noise Reduction filters Compressor / Expander)
- A built-in Digital Mode Decoder for RTTY, PSK31 and HF-FAX !
- A Shortwave and User's Data Base Manager with Extended ILG Database support and a convenient User's Database..

- RxPlus offers many advanced features like:
- Calibration Wizard
- Full Coverage Frequency Error Correction,
- IF PassBand Tuning,
- ECSS Support

You can get more information and download RxPlus from the following (temporary) WWW site:

http://www.cam.org/~noelbou/RxPlus

Your comments would be greatly appreciated.
Please email to RxPlus@teledata.qc.ca

Noël Bouchard
RxPlus Developer
Pres. TELE DATA Inc.

139. I hate to put this list on moderated...BUT...

Yahoo group: ComputerControlledRadioSoftware
Date: 2004-06-18 04:01:23 UTC
From: 'Manny Goldstein'
Topic: 139 Message: 139

I am sick of those spamming $&^%#^&s, and so I see no choice.

I will try and check in often enough to keep it flowing.

BTW...BIG NEWS for Uniden / Radio Snack TrunkTracker fans.

I have been working on my WAY overdue upgrade to EZProg 895. I just have a reliability issue (incomplete talkgroup string returned) and a comm port issue (too many hits on the RS-232 to verify current mode) to work out, as well as "prettifying" the database, and it should be good to go. Hopefully, I will be able to, in good conscience, release it in August (if I hide my "Command and Conquer - Generals" disk).

If any brave souls want it as-is, I'll be glad to send it, but keep in mind that you will need MS Access 97 or later to edit the Alpha tags. The channel data backup is still in text format.

Mannny!!

Hi! My name is John My call Letters are KD7POEyou can look me up on QRZ.

I used to have my own group on Yahoo, but it never took off so I canceled it.

You can ask Len N2LEN he knows me from EchoLink and his site. You can also ask N2BR Bobby he also knows me.

I am retired, live on the west coast and check my E-Mails about 4 or 5 times daily sometimes more often.

Enough said, if you need a hand moderating the site, just ask, you got it.

KD7POE
John in Nevada

Date: 2004-07-03 15:10:55 UTC
From: w1nra
Topic: 141 Message: 141

I own and moderate several groups on yahoo. If you must moderate, and I can see really no way around it with the garbage of today, it is better and easier to limit MEMBERSHIP, then you will eliminate most spammers and porno artists.
In my groups, if the applicants do not list either call letters (ham) or give me a message indicating an interest in electronics, ham radio, scanning or other related topics, I DO NOT LET THEM IN PERIOD...
CLUE: IF THERE IS NO INFORMATION IN THEIR PROFILE...DO NOT LET THEM IN AT ALL. THE NAME WILL ALSO GIVE YOU A HINT OF WHO NOT TO LET IN.

If they are really interested in your group, they will send you the needed information, if not forget about them. GOOD LUCK...try it that way, you'll like it, I'm sure.

If anyone does slip through you can ban them later, but if you follow the above guidelines, I'm sure you will have little or no problems.
I've had no problems with garbage and that is a lot simpler than having to moderate all messages and uploads.

Also, having more than one helper causes problems if you don't all go by good solid, set rules from the start. I helped moderate one group and there were several others and they would approve anyone who asked for membership and it made my efforts useless so I quit moderating that group.
EITHER DO IT YOUR SELF OR HAVE ONLY ONE OTHER PERSON on your moderating list for best results.

Read the opening pages on my groups to see how I've done it. I think it will help you. There are so many good groups and we don't need the trash/garbage and don't have to put up with it.

My ten meter beacon group:
http://groups.yahoo.com/group/TenMeterBeacons/

Another group that I assist moderation for new and prospective hams:
http://groups.yahoo.com/group/teenhamradiooperators/

Jerry / W1NRA

PS: hello to the group. I just joined.

142. Decoding packet

Yahoo group: ComputerControlledRadioSoftware
Date: 2004-07-03 15:20:30 UTC
From: w1nra
Topic: 142 Message: 142

I am interested in reading (only) packet. Packet radio in our area has died off completely. I have two Kam Plus Tnc's but they are no longer hooked up. I had a packet station for maybe 5 years but finally just unplugged it and set it aside.

I may send some packet later but for now just want to monitor the packet station on the ISS.
Several of us have downloaded the MIXW program but we can get it to work in almost everything EXCEPT PACKET.... and that's all we wanted to use it for. We send psk, rtty, sstv etc using hamscope and it works great.

If we use mixw2 to try to send/receive packet it sends and the signal is shown in the water fall as it should but we can't get the message decoded so it will print on the screen. We figure maybe we are missing a click box SOMEWHERE??????
We can send and copy CW and most other modes but NOT PACKET. WHAT GOES????

There are several selections for 1200 baud and we've tried all of them with no results.

Thanks for any help.

Jerry / W1NRA
EM72, east Alabama/ west Georgia

147. RxPlus: Full featured Controller Software

Yahoo group: ComputerControlledRadioSoftware
Date: 2004-09-07 15:51:40 UTC
From: Noel Bouchard
Topic: 147 Message: 147

Hello Group !

I thought that some of you might be interrested to know about my RxPlus Software:
It's a 4 in 1 program with:
- A full featured Rcvr controller
(TenTec RX320, Drake R8A/B, ICOM IC-R75 and others (NRD 535/545, Kenwood R5000) soon ...)
with many exclusive features (Visual Band Explorer, Strong signal Highlighting, Calibration Wizard etc ...)
- Audio DSP Processor with Noise Reduction, BanPass, Notch, Compressor / Expander filters.
- Built-in Digital Modes Decoder wih RTTY, PSK31, HF-FAX & SSTV support !
- Full featured ILG / Users / .320 DataBase Manager.

No less than 12 ways to Tune your receiver !
- Tuning Knob, KeyBoard, KeyPad (NUM+/-), Mouse, Mouse Wheel, Visual Band Explorer
- Memories, Quad VFOs, BookMarks, ClipBoard, "Fast Tuning" Slider and Data Base Lookup !

You can have all details about RxPlus at:

http://www.cam.org/~noelbou/RxPlus

Check the Receiver specific page at:

http://www.cam.org/~noelbou/RxPlus/RxPlusRcvrs.php

Thanks and good listenning !

No?l Bouchard
RxPlus Developer.

153. RxPlus V1.56

Yahoo group: ComputerControlledRadioSoftware
Date: 2004-10-27 14:30:57 UTC
From: Noel Bouchard
Topic: 153 Message: 153

Hello Groups !

I just posted a new version of RxPlus, V1.56 .

- The DSP Noise Reduction has been "revisited" and is now even more effective.
- A new Linear Scan display (for the RX320 only)
- A bug has been fixed in the RTTY decoder ... which is now better.
- Numerous other small changes ...

This last version supports the following receivers:
Drake R8A/B, ICOM IC-R75, JRC NRD-535, Kenwood R5000,
TenTec RX320(D) and TenTec RX350D
<http://www.cam.org/%7Enoelbou/RxPlus/#Presentation>
You can get RxPlus from my site at:
http://www.cam.org/~noelbou/RxPlus

If you already installed RxPlus you can get an updated EXE from
the file section of RxPlus Yahoo group at:
http://groups.yahoo.com/group/RxPlus

Good listenning all ...

154. ICOM 2720 or the IC-W32A

Yahoo group: ComputerControlledRadioSoftware
Date: 2004-10-29 21:20:26 UTC
From: Dave
Topic: 154 Message: 154

Hello

Looking for the CI-V address of the IC-2720 and the W32A handheld.

I have a few interfaces and they don't seem to work. I found out about the sleeve pin being active instead of the tip. (the mini phono plug)

But now working on what status the computer needs to operate.

Am now controlling a 746 and a 706 with no problem. (also an Vertex VR-5000) (RS-232)

Thanks
Dave
WB7G

those two radios are computer PROGRAMED not computer controlled
they dont use a CT17 to run them
the computer cable that programs they are differnt from the CT17 and
isnt interchangable

Gary; be a bit more specific. Using the 895 trunking or conventional? Do you often use the 895 for checking freqs from other lists? What are your interests?
In general, since you're using a Win9x version OS, Winscan 2.1 works pretty well, and I think you'll find it's the acknowledged champ. However if you have another machine that is running a newer OS (like XP), Scan Control is the one I'd recommend. You will need a seperate (free) recorder program (Winscan has one built in) if you go this route. Winscan does NOT work reliably on these newer OSs.
You should know that Pozilla's (the ones who wrote Winscan) customer support is practically nil; but the 2 895 Egroups have, I'm sure, enough folks to get you over the hurdle. By contrast, Scan Control has its own Egroup, and the support there is superb. No problem getting questions answered and hints as well.
If you do a lot of researching freqs, Radiomax would be the obvious choice.
I've written reviews on the Lite (programming only) version of Scan Control, as well as Radiomax. In addition, I just submitted a review of the full version of Scan Control, which hasn't been published yet. Rich Wells wrote a review on Winscan 1.0; all of these have links on the 2 895 Yahoo Egroups as well as on the Strong Signals software page.

Winscan and Scan Control will both get the job done. As for the
discriminator tap...well, you know there are some things we're not
supposed to listen to....'nuff said. Of course, you can run Trunker
(and even try to use T4Win, which I could never get to work...) on
those analog Moto systems that the 895 won't handle.

From: ka3jjz
Topic: 165 Message: 167

Gary - in both the 895 Yahoo Egroups, there's a program which is the grandfather of Winscan called PC895. You can download it free. It doesn't have all the functions of Winscan (it has about 1/2, in fact), but it does provide you with a good 'test' program to insure your cable is working correctly.
Personally, the other 2 895 trunking programs - Scancat and Radio Manager (both versions) really aren't worth it. Scancat is way overblown and overpriced, while Radio Manager/Trunk Manager has one of the most horrific data editors I've ever seen. Trying to type data into that program, I was gnashing my teeth and swearing in 3 languages. When I start doing that, you know things are not going very well. :.))

Both Scan Control V4.0 and ARC8 from BuTel can read and edit the
data for the BCT8. Check out:

http://www.scannersoft.com -and-
http://www.butel.nl

Both BuTel and Scan Control have Yahoo group support.

For what operating system?

You looking for the old dos stuff or Pro-Turbo that runs under windows, Pro-Turbo
will run on any windows operating system from a P100 and up, the old Dos stuff might
run on anything P166 or under, you can 99% forget about it running on anything faster
than P166.

It looks like for that site you need to have skype
audio installed or running..
I do but I also was not able to get connected to his
audio but I do like the layout of the web radio
control interface
The advantage of skype over windows media play is
1. no audio delay when tuning
with windows media player you can have up to 20
seconds of audio delay
meaning when you change a frequency or setting on the
radio interface it will take up to 20 seconds for you
to hear the change in audio .
With that being said you can check out my web page
http://kchamnet.gotdns.com
there is a pcr 1000 you can remotely tune
make sure you click on the start audio link on the REC
web page
note that the audio will be delayed 20 seconds since
I am using windows media player / encoder
there is also a scanner on-line to listen to.
if you are interested in running a remote receiver
then check out the swlog software
Gary

176. enquiry on transmitter and receiver design for wireless alert alarm system

Yahoo group: ComputerControlledRadioSoftware
Date: 2005-01-02 13:59:08 UTC
From: peaceharmony7
Topic: 176 Message: 176

Hi All,

I'm an engineering diploma student who is assigned by the school to design a wireless automated alarm system for elderly studio home or old folks'home use.Our project group was given TX2-433-160-5V and RX2-433-160-5V (from www.radiometrix.com) for the transmitter and receiver to be used with the hardware and software (Labview from National Instrument) to be interfaced.

I was adviced by someone to seek the understanding of the command(such as the ASCII code or sort of "VISA") for the transmitter and receiver to work.Also,I was adviced on gaining understanding on how the transmiitter and receiver is to be interface with the computer (PC) running the Labview(currently specified by our lecture to be used for this project).

In addition,I would like to seek your advice and assistance on the following matter:

1)from the data sheet available at radiometrix company website,I can only obtain infomation on the pin combination and its usage.

2)Based on my current understading of RF/wireless communication,there is a need for the encoder and/or register(e.g PISO register) for data to be converted from the compuer program and other input hardware(e.g sensor and relay circuit) to binary digit for transmission and decoder at receiver side for the LCD running microcontroller PIC18 F452 series from microchip to display the level and unit located at the LCD panel on that level and on the hand held LCD device carry by the nurse on duty.

3)If point no.2 is true,could you kindly advice me on the details of such integration of the hardware and software?

4)Also,could you kindly advice me on chosing a suitable decoder,encoder,register,..... that is cost effective and simple to configure/patch up.Or is there any material that I can be refered to?

5)How do a beginner test on whether his transmitter is transmitting info to receiver?Also,whether the receiver is able to receiver the correct info.?First,just testing the transmitter and receiver hardware circuit patch up.

I do sincerely look forward to your reply.In addition,I seek your understanding on the above mentioned enquires as I have exhausted all possibilities on searching for such info over the past few weeks.

Wish everyone a Happy,peacefull and fulfilling 2005.

I got this disk with a Pro-2006 with a 232 interface installed , the files are listed below. I would imagine this is way old. Does anybody happen to have it. The manager.exe is corrupt and I sure would like to see what this 2006 will do. Any help appreciated at 100%. Here's the list of files on the disk.

Folder Name is Scanner Manager

Files in the folder are

Engine.dll
L3RES.dll
L4RES.dll
manager.cnt
Manager.exe
MANAGER.HLP
scancore.dll
SCANSTAR.SWF
WebGrabber.htm

hello again, first off I would like to thank you for all the prior info you have shared. next as I was searching the archives I found a post stating you may have winscan 2.1 to possibly share, if so I would really appreciate a copy. I intend to use winscan on my pc 98se, also I would like to install into an older laptop toshiba t4850ct with windows 98. laptop only has floppy 3.5 diskette slot for install. do you know if I can install winscan with a diskette. if I save winsan to hard drive then transfer to diskette, will I be able to transfer into laptop. I truly appreciate any info you might have thank you gary andres

Winscan and Scan Control will both get the job done. As for the
discriminator tap...well, you know there are some things we're not
supposed to listen to....'nuff said. Of course, you can run Trunker
(and even try to use T4Win, which I could never get to work...) on
those analog Moto systems that the 895 won't handle.
73s and GL...Mike

Hi,
I try to use TDL2a module. It is half-dumplex RF transceiver.
I investigate how to test the modules.
I want to use one of modules as trasmitter and other one as receiver.
I wonder how to use Enable pin to set module transmitter or receiver.
For example,
At transmitter side, Enable pin will be connected to the ground to
activate. How will I set Enable pin at receiver side?
Is anyone to have any idea about it?

(I think it is general question for rf transceiver. At the same side,
we should set one of them as a transmitter, other one as receiver.)

From: Sky High
Topic: 189 Message: 189

I have encountered a rather odd situation or maybe not to you "experts"....I have ran Probe 7.0 on an IBM 390 Laptop for a while and had fantastic results with Win 2000 I might add.

OK Now - I have installed Probe 7.0 on a laptop with Windows XP and it's totally opposite. The Scanner (same one I used with the IBM)(oh and it's a 2006 w/ FULL Opto 456) RX's very weak and the settling time is going haywire ,1st set at 18 as it worked great on the 390 laptop, but on this one (1.1 g proccessor) I have to set it as high as 100 to stop the "settling time may be to low - press I - etc," . Really odd to me , kind of wondering if anyone else might use XP and possibly share your settings with me so I can get this back in full swing. The weak RX is really puzzling me ??

Thanks in advance also , Tom

198. RadioControl Lite Edition now supports 100 channels per Memory File

Yahoo group: ComputerControlledRadioSoftware
Date: 2006-08-16 17:53:26 UTC
From: Ralf Reiterer
Topic: 198 Message: 198

Hi group,

the RadioControl Lite Edition now allows 100 instead of 50 memory channels per Memory File which makes it an interesting choice for many radios. Beside direct control you can manage frequencies in a real database, manage memories and execute frequency searches. There is also an updated driver for Icom radios which also supports the radio internal scanner in the Professional Edition.

A free Trial Edition and more information is available at:
http://www.radioctl.com

Regards
Ralf

199. EUROPEAN AMPLITUDE MODULATION AMATEUR RADIO GROUP

Yahoo group: ComputerControlledRadioSoftware
Date: 2006-09-08 13:48:39 UTC
From: gvastianos
Topic: 199 Message: 199

EUROPEAN AMPLITUDE MODULATION AMATEUR RADIO GROUP

NEW YAHOO GROUP: http://groups.yahoo.com/group/eamarg/

This is a group for licenced amateur radio operators (HAMs) who are interested in the AMPLITUDE MODULATION (AM) mode of communications. The group exists to promote the AM operation in the HAM bands and provide information about operating events and technical matters.

EAMARG encourages regional AM activity insuring there is AM available somewhere on the amateur bands. Based on the fact that the majority of the AM calling frequencies in USA belong outside the european HF bandplans... one of the EAMARG main goals is to help in the establishment of AM calling frequencies that will be compatible with the HF bandplans of the european countries.

EAMARG future plans including the sponsorship of operating events and contests that will promote the use Amplitude Modulation.

In order to join this group you must be a licenced radio amateur.

201. Multiple Program Rig Control

Yahoo group: ComputerControlledRadioSoftware
Date: 2006-10-18 04:13:21 UTC
From: Harold Aaron
Topic: 201 Message: 201

Hi all. I am using EasyLog as rig control and logging program, and it controls PRO III through a RigBlaster PRO. I also use MixW for CW and digital modes, and it also is capable of Rig Control, but at present it is an either-or situation. Either EasyLog controls or MixW, not both.

Wondering if anyone has ever tried to use two programs doing rig control at the same time. For instance, I have a CV-17, and an extra com port. Has anyone ever paralled the rig control input into the PRO III?

Appreciate any suggestions.

BEst,

Hank

202. APRS Remote Control

Yahoo group: ComputerControlledRadioSoftware
Date: 2006-11-08 01:39:00 UTC
From: acentient_software
Topic: 202 Message: 202

Dear Radio Amateur,

Please forgive the slight commercial nature of this announcement, but I have developed a new home automation application that can be remotely accessed via an APRS equipped amateur radio, which I thought this group would find interesting.

For more details, please see my press release below.

Best regards,

Robin Grunwald, G1VJW
admin@acentient-software.com

# # #

APRS Remote Control

Acentient Software has just released v1.02 of Adaptive Home Logic, a new multi-purpose home automation application for Windows XP, which introduces the unique concept of being able to remotely control your home automation system or electronics from an APRS equipped amateur radio, via the APRS amateur packet radio network, independently of anyone else's communication infrastructure.

This makes it particular useful for monitoring / controlling systems or equipment where the other forms of communication are simple not available, possible or prohibitively expensive, such as an automation system at a remote / rural location, in a mobile home, yacht or RV, etc. The program can also be used to transmit telemetry to an APRS station on a regular schedule or automatically when an event is triggered.

This new program, which can interface with many home automation peripherals, generic serial devices and parallel input / output boards, integrates many advanced features to offer wide ranging flexibility within an easy to use and understand application.

Featuring Scheduling / Conditional Events, 2-way Speech, Remote Control & Reporting (Internet / Amateur Radio), Digital I/O, Serial Data (RS-232 / RS-485), X10, File Data, E-Mail Alerts, Sunrise / Sunset, Screen Overlay Scenes, Data Logging + More!

The program can also be used to form the basis of a simple or sophisticated home automation system, as well as for other automation applications.

For more details, please visit www.acentient-software.com

Adaptive Home Logic is currently available at an introductory price of just $34.95

Anyway you can speed up the web site ?
Loads as slow as a snail on downers (all pages)
long time since i seen a site that slow maybe when i had a V21
modem !?! ;-)

Was interested but could not wait 7 mins per page sorry.

I have a MCS2000 VHF radio model 2 control head, I'm looking for a way to control this radio via my soon to be installed homebrew CarPc.

I have heard of the Vrch (Virtual radio control head) but cant seem to find it anywere.
So has anyone tried to make something like this. Any information would by great.

thank you

Hello,

My name is Glenn and I am into computer controlled radios.

I mainly have two that I use.

Icom PCR1000 with various software.

Radio Shack PRO2052 with some programming.

Plus I also monitor various digital traffic. ACARS HFDL and a few others.

I am here to learn more and associate with others with the same ideas and thoughts.

Thanks,

Glenn Blum

Topic: 206 Message: 206

Anyone...Anyone...Getting desprate. Don't laugh but I'm running Windows 98, MixW RigExpert USB, and trying to run ACLog and have it read frequency and mode on an Icom725. WHEW. MixW runs well both mode and cat control. What is the secret for ACLog's setup using the RigExpert USB seperately? Exhausted! I would like to run MixW for CW and digital modes and ACLog for Voice and be able to automatically log freq and mode. I can't get ACLog to recognize info through MixW RigExpert USB. I tried most other sites dedicated to these programs. Thanks for any help. John Q. (KB6DLN)

From: Don
Topic: 210 Message: 210

Hello,
Anyone have any suggestions on software to remote control your pc? I have looked a few freeware remote applications but they seem to not to work for me for some reason, or does anyone have any suggestions on ones they have used commercial versions like pc anywhere or laplink etc etc, very interested to just have something simple to control a pc remotely....would prefer freeware but willing to pay for commercial version if does the job and easy to use. Thanks for any suggestions or your thoughts on this issue.

Hi Don

If it is for rig control then there are a few nice free packakges inc. Ham Radio Deluxe. If its just for regular PC type stuff then again there are an abundance of packages. Most of the PC only stuff is pretty good esp PC Anywhere, and VNC. I have managed transatlantic control via MSN (but not on dial up !!!) using remote desktop support.

Most packages require a little knowledge of networks and security etc. and if you are uncomfortable with these aspects it may be better to "seek a geek". If the remote computer has sombody there when you want control the MSN option is pretty useful and easy to set up.

Bob.

VNC.

Free, lightweight, very responsive and just works.

Or, if you are using XP Pro/Vista on the machine to be controlled, use Remote Desktop.

Jim
